Package 'SNPtools'

July 6, 2025

Title S4 Tools for Reading and Organizing Genetic Data

Version 0.1.0

Maintainer Vinícius Junqueira < junqueira vinicius@hotmail.com>

Description SNPtools provides an integrated suite of tools for handling SNP genotype data in large-scale genetic studies. The package supports importing and merging genotype files, performing quality control on SNP markers and samples, and preparing data for downstream analyses using popular software such as FImpute and PLINK. It offers S4 classes and methods to efficiently encapsulate SNP data, along with utilities for generating genotype summary statistics and visualization. Additional functionalities on the current version include anticlustering approaches for batch effect control, automated script generation for external software, and streamlined workflows for large datasets commonly encountered in animal and plant breeding programs. The package is designed to facilitate reproducible and scalable SNP data analyses in quantitative and statistical genetics.

cbin	d_SnpMatrix Safe cbind for SnpMatrix preserving dimnames	

Description

This function performs a column-wise binding of multiple SnpMatrix objects, explicitly preserving row names and column names, avoiding unexpected "object has no names" warnings.

Usage

```
cbind_SnpMatrix(...)
```

Arguments

... SnpMatrix objects to combine (must have identical row names).

Value

A single combined SnpMatrix with preserved row and column names.

check.sample.call.rate 3

Examples

Description

Identifies samples with call rate below a given threshold.

Usage

```
check.sample.call.rate(sample.summary, min.call.rate)
```

Arguments

```
sample.summary A data frame with a "Call.rate" column for each sample. min.call.rate Minimum acceptable call rate (between 0 and 1).
```

Value

A character vector with the names of samples to remove.

```
check.snp.same.position

Check SNPs mapped to the same position
```

Description

Identifies groups of SNPs that are mapped to the exact same genomic position on each chromosome. Returns a list where each element corresponds to one group of overlapping SNPs.

Usage

```
check.snp.same.position(snpmap)
```

Arguments

snpmap

Data frame containing at least columns "Name", "Chromosome", and "Position".

Value

A list of character vectors, each with names of SNPs found at the same position.

4 FImputeRunner

combinarSNPData

Combine multiple SNPDataLong objects

Description

This function merges a list of SNPDataLong objects, typically representing different SNP panels or datasets, into a single unified SNPDataLong object. It ensures that all genotype matrices have the same set of SNPs (filling missing SNPs with NA), and merges the marker map information while removing duplicate SNP entries.

Usage

```
combinarSNPData(lista)
```

Arguments

lista

A list of SNPDataLong objects to be combined.

Value

A single SNPDataLong object containing the combined genotype matrix, merged map, and a concatenated path string.

Examples

```
## Not run:
combined <- combinarSNPData(list(snp_obj1, snp_obj2, snp_obj3))
## End(Not run)</pre>
```

FImputeRunner

Build FImputeRunner object

Description

A convenience function to construct a 'FImputeRunner' object from basic inputs.

```
FImputeRunner(object, path, exec_path = "FImpute3", name = "data")
```

genoToDF 5

Arguments

A character string indicating the directory to save FImpute files. path

Path to the FImpute executable (default = "FImpute3"). exec_path

name Name for the dataset (used internally, default = "gen_data").

geno A SnpMatrix object.

map A data.frame with SNP metadata (columns: Name, Chromosome, Position).

Value

An object of class 'FImputeRunner'.

genoToDF Convert geno slot from SNPDataLong to a data.frame

Description

Converts the genotype matrix (geno slot) of a SNPDataLong object to a data.frame, with optional centering and scaling per SNP (column).

Usage

```
genoToDF(object, center = FALSE, scale = FALSE)
```

Arguments

An object of class SNPDataLong. object

center Logical or numeric. If TRUE (default FALSE), center columns to mean zero. scale

Logical or numeric. If TRUE (default FALSE), scale columns to standard devi-

ation one.

Value

A data.frame with individuals as rows and SNPs as columns (numeric 0/1/2, or centered/scaled values).

```
## Not run:
df <- genoToDF(nelore_imputed, center = TRUE, scale = TRUE)</pre>
head(df[, 1:5])
## End(Not run)
```

6 importAllGenos

getGeno	Flexible and efficient genotype file reading with autodetection using fread

Description

This generic and method allow flexible import of SNP genotype data from Illumina FinalReport files, supporting fast initial column detection using data.table::fread, followed by full genotype matrix construction via snpStats::read.snps.long.

Usage

```
getGeno(...)
```

Arguments

path	Path to the	directory	contain	ing Fi	nalRepo	rt.txt

fields A list specifying column indices for sample, SNP, allele1, allele2, and confi-

dence

codes A character vector with allele codes (e.g., c("A", "B"))

threshold Confidence threshold for genotype calling

sep Field separator used in the files

skip Number of lines to skip at the start of the file verbose Logical; if TRUE, displays progress messages every Frequency of progress update (number of SNPs)

Value

An SNPDataLong object containing the genotype matrix and map, or NULL if an error occurs

importAllGenos	Import and combine multiple genotype configurations

Description

This generic and method import genotype data from multiple configurations defined in an SNPImportList object, then combine them into a single unified SNPDataLong object.

```
importAllGenos(object)
```

importFImputeResults 7

Arguments

object An object of class SNPImportList containing import configurations

Value

A single combined SNPDataLong object

Description

Reads existing imputed results from a given path and returns an object of class SNPDataLong.

Usage

```
importFImputeResults(path, method = "R")
```

Arguments

path Character. Path to the folder containing 'output_fimpute' (e.g., "fimpute_run_nelore").

method Character. "R" (default) or "Rcpp". Passed to read.fimpute().

Value

An object of class SNPDataLong containing the imputed genotypes and SNP map.

Description

Reads and imports multiple genotype datasets specified in a list of configurations. Each configuration must include the path to the genotype data and information on field mapping. Optionally, you can also specify codes, quality threshold, separator, lines to skip, and a subset of IDs to retain. The function automatically fills the 'xref_path' slot per individual and combines maps into a single data.frame, adding a 'SourcePath' column indicating their origin and removing duplicated SNP rows (by Name). Prints progress messages indicating the current path being loaded (with counter).

```
import_geno_list(config_list)
```

8 plotPCAgroups

Arguments

config_list

A list of configuration lists. Each element should contain: - 'path' (character): Path to the genotype file or folder. - 'fields' (list): Named list defining the columns (e.g., SNP ID, sample ID, alleles, confidence). - 'codes' (character vector, optional): Allele codes (default is c("A", "B")). - 'threshold' (numeric, optional): Maximum allowed missingness or confidence threshold (default 0.15). - 'sep' (character, optional): Field separator in the input file (default tab "\t"). - 'skip' (integer, optional): Number of lines to skip at the beginning of the file (default 0). - 'verbose' (logical, optional): Whether to print detailed messages (default TRUE). - 'subset' (character vector, optional): Vector of sample IDs to retain after import.

Value

An object of class 'SNPDataLong' containing: - Combined genotype matrix ('geno'). - Combined map ('map') as a single data.frame with 'SourcePath' column and without duplicated rows. - Combined 'xref_path' vector (one entry per individual). - 'path' slot as a semicolon-separated string of all input dataset paths.

plotPCAgroups

Plot PCA groups from anticlustering result

Description

Plot PCA groups from anticlustering result

Usage

```
plotPCAgroups(pca_res, groups, pcs = c(1, 2), filename = NULL)
```

Arguments

pca_res A prcomp object.

groups A factor or vector of group assignments.

pcs Vector of length 2 indicating which PCs to plot (default: c(1, 2)). filename Optional. If provided, saves plot to this file (e.g., "antic.png").

Value

A ggplot object (also prints to screen).

```
## Not run:
res <- runAnticlusteringPCA(nelore_imputed, K = 2, n_pcs = 20)
plotPCAgroups(res$pca, res$groups)
## End(Not run)</pre>
```

qcSamples 9

qcSamples

Quality control on samples

Description

Applies quality control (QC) procedures to samples in a 'SNPDataLong' object, based on heterozygosity and call rate thresholds.

Usage

```
qcSamples(x, ...)
## S4 method for signature 'SNPDataLong'
qcSamples(
    x,
    heterozygosity = NULL,
    smp_cr = NULL,
    action = c("report", "filter", "both")
)
```

Arguments

x An object of class 'SNPDataLong'.

heterozygosity A numeric threshold or range for heterozygosity. Samples outside this threshold

are removed.

smp_cr Minimum acceptable sample call rate (between 0 and 1). Samples below this

value are removed.

action Character string indicating the action to perform. One of: - "report": only

returns a list of samples to remove and those kept; - "filter": returns a filtered object without reporting; - "both": performs filtering and returns the filtered

object.

Value

Depending on the 'action' argument: - '"report"': returns a list with removed and kept samples; - '"filter"': returns a new 'SNPDataLong' object with filtered genotypes; - '"both"': returns a list with: - 'filtered': the filtered 'SNPDataLong' object; - 'report': a list of removed and kept samples.

10 qcSNPs

qcSNPs Quality Control for SNPDataLong with optional criteria	
---	--

Description

Applies flexible quality control filters on an object of class SNPDataLong. Supports call rate filtering, minor allele frequency (MAF), Hardy-Weinberg equilibrium (HWE), removal of monomorphic SNPs, exclusion of specific chromosomes, optionally removing SNPs without positions, and optionally removing SNPs at the same genomic position (keeping the one with highest MAF).

Usage

```
qcSNPs(x, ...)
```

Arguments

X	An object of class SNPDataLong.
missing_ind	Maximum allowed proportion of missing data per individual (currently not implemented).
missing_snp	Maximum allowed proportion of missing data per SNP (currently not implemented).
min_snp_cr	Minimum acceptable call rate for SNPs (e.g., 0.95). SNPs below this threshold are removed.
min_maf	Minimum minor allele frequency allowed for SNPs (e.g., 0.05). SNPs with lower MAF are removed.
hwe	p-value threshold for Hardy-Weinberg equilibrium test (e.g., 1e-6). SNPs violating this are removed.
snp_position	Logical. If TRUE, removes SNPs mapped to the same position, retaining only the one with highest MAF.
no_position	Logical. If TRUE, removes SNPs without defined genomic positions.
snp_mono	Logical. If TRUE, removes monomorphic SNPs (with no variation).
remove_chr	Character vector of chromosomes to exclude (e.g., c("X", "Y")).
action	One of "report" (returns a list of removed SNPs), "filter" (returns filtered SNPDataLong), or "both" (returns both).

Value

Depending on the action argument: - "report": list of SNPs removed by each filter and SNPs retained. - "filter": filtered SNPDataLong object. - "both": list containing the filtered object and detailed report.

qc_header 11

Examples

qc_header

Formatted header message

Description

Prints a formatted message with a border for section titles in the console.

Usage

```
qc_header(title)
```

Arguments

title

Character string to be printed inside the header box.

Value

No return value. Used for side effects (message).

```
qc_header("Quality Control on Samples")
```

12 rbind_SnpMatrix

 ${\tt rbindSnpFlexible}$

Faster row-bind for SnpMatrix objects with differing columns

Description

Combines multiple SnpMatrix objects by rows, automatically handling differing SNP columns, optimized for large matrices.

Usage

```
rbindSnpFlexible(...)
```

Arguments

One or more SnpMatrix objects.

Value

A single SnpMatrix object with all rows combined.

Examples

```
## Not run:
combined <- rbindSnpFlexible(brangus_geno, batch_BM@geno)
## End(Not run)</pre>
```

rbind_SnpMatrix

Safe rbind for SnpMatrix preserving dimnames

Description

This function performs a row-wise binding of multiple SnpMatrix objects, explicitly preserving row names and column names, avoiding unexpected "object has no names" warnings.

Usage

```
rbind_SnpMatrix(...)
```

Arguments

... SnpMatrix objects to combine (must have identical column names).

Value

A single combined SnpMatrix with preserved row and column names.

read.fimpute 13

Examples

```
## Not run:
rbind_SnpMatrix(matrix1, matrix2)
## End(Not run)
```

read.fimpute

Read imputed genotypes from FImpute output and return SNPData-Long object

Description

Reads imputed genotypes and SNP information from FImpute output, builds a SnpMatrix and a corresponding map, and returns an SNPDataLong object.

Usage

```
read.fimpute(file, method = c("R", "Rcpp"))
```

Arguments

file Character. Path to the FImpute output directory (usually "output_fimpute").

method Character. "R" (default) for vectorized R implementation, or "Rcpp" for com-

piled C++ implementation.

Value

An object of class SNPDataLong containing the imputed genotypes and SNP map.

```
## Not run:
snp_long <- read.fimpute("output_fimpute", method = "R")
## End(Not run)</pre>
```

14 runFImpute

runAnticlusteringPCA Run PCA and Anticlustering on SNPDataLong

Description

Converts a SNPDataLong object to a data.frame, runs PCA, and performs anticlustering grouping.

Usage

```
runAnticlusteringPCA(object, K = 2, n_pcs = 20, center = TRUE, scale = TRUE)
```

Arguments

object An object of class SNPDataLong.

K Number of groups for anticlustering.

n_pcs Number of top principal components to use (default: 20).

center Logical or numeric. Center columns before PCA (default: TRUE). scale Logical or numeric. Scale columns before PCA (default: TRUE).

Value

A list with: - groups: vector with group assignments. - pca: the PCA result object (prcomp). - pcs: matrix of top PCs used in anticlustering.

Examples

```
## Not run:
res <- runAnticlusteringPCA(nelore_imputed, K = 2, n_pcs = 20)
table(res$groups)
## End(Not run)</pre>
```

runFImpute

Run FImpute from a FImputeRunner object

Description

This function runs the external FImpute software using a 'FImputeRunner' object, ensuring that all required input files are present and the results are imported.

```
runFImpute(object, verbose = TRUE)
## S4 method for signature 'FImputeRunner'
runFImpute(object, verbose = TRUE)
```

saveFImpute 15

Arguments

object An object of class 'FImputeRunner'.

verbose Logical. If TRUE (default), FImpute output will be printed to the console.

Value

An updated 'FImputeRunner' object with the 'results' slot populated (SnpMatrix).

Examples

```
## Not run:
# Example: Running FImpute from a FImputeRunner object
path_fimpute <- "fimpute_run_example"</pre>
param_file <- file.path(path_fimpute, "fimpute.par")</pre>
fimpute_exec <- "FImpute3" # assuming it is in PATH</pre>
export_obj <- new("FImputeExport",</pre>
                   geno = geno_obj@geno,
                   map = geno_obj@map,
                   path = path_fimpute)
runner <- new("FImputeRunner",</pre>
               export = export_obj,
               par_file = param_file,
               exec_path = fimpute_exec)
runner <- runFImpute(runner, verbose = TRUE)</pre>
head(runner@results)
## End(Not run)
```

saveFImpute

Save genotype and map files in FImpute format

Description

S4 method to export genotype (.gen), map (.map), and parameter (fimpute.par) files compatible with [FImpute](https://www.aps.uoguelph.ca/~msargol/fimpute/).

```
saveFImpute(object, ...)
## S4 method for signature 'FImputeExport'
saveFImpute(object)
## S4 method for signature 'SNPDataLong'
saveFImpute(object, path = NULL)
```

16 savePlink

Arguments

object An object of class 'FImputeExport' or 'SNPDataLong'.

... Additional arguments passed to methods.

path Output directory (default: "fimpute_run" for SNPDataLong).

Value

No return value. Files are saved to disk.

saveFImputeRaw Ex

Export genotypes and map using basic arguments

Description

Convenience function to export FImpute files directly from a 'SnpMatrix' and map 'data.frame'.

Usage

```
saveFImputeRaw(geno, map, path, xref = NULL)
```

Arguments

geno A 'SnpMatrix' object.

map A data.frame with columns 'Name', 'Chromosome', 'Position', and 'SourcePath'.

path Output directory.

xref Optional vector of identifiers per individual (used to assign numeric chip IDs).

savePlink Save SNPDataLong object to PLINK format

Description

Saves genotype and map data from an SNPDataLong object in PLINK format (.ped/.map and optionally binary files).

```
savePlink(
  object,
  path = "plink_out",
  name = "plink_data",
  run_plink = TRUE,
  chunk_size = 1000
)
```

Subset 17

Arguments

object An object of class SNPDataLong.

path Character. Directory where files will be saved.

name Character. Base name for PLINK output files.

run_plink Logical. If TRUE (default), runs PLINK1 to convert to binary files. If FALSE,

only .ped and .map files are saved.

chunk_size Integer. Number of individuals per chunk for writing .ped file (default: 1000).

Value

No return value. Files are saved to disk.

Examples

```
## Not run:
savePlink(genotypes_qc, path = "plink_out", name = "nelore_qc", run_plink = TRUE, chunk_size = 2000)
## End(Not run)
```

Subset

Subset method for SNPDataLong

Description

Subset method for SNPDataLong

Usage

```
Subset(object, index, margin = 1, keep = TRUE)
```

Arguments

object A SNPDataLong object.

index Character vector with row (individual) or column (SNP) names to filter.

margin Integer: 1 = rows (individuals), 2 = columns (SNPs).

keep Logical: TRUE to keep specified levels, FALSE to discard them.

Value

A new SNPDataLong object, subsetted accordingly.

```
\verb|summary,SNPD| at a Long-method|
```

Summary for SNPDataLong objects

Description

Provides a detailed summary of an SNPDataLong object, including sample and SNP counts, proportion of missing data, and SNP distribution by chromosome if mapping information is available.

Usage

```
## S4 method for signature 'SNPDataLong'
summary(object, ...)
```

Arguments

object

An object of class SNPDataLong.

Value

Prints a summary to the console. Returns NULL (invisible).
